### DETAILED ACTION

Any rejection of record in the previous action not addressed in this office action is withdrawn. The new grounds of rejection herein were necessitated by amendment and, therefore, this action is final.

#### *Claim Objections*

Claim 9 is objected to because of the following informalities: applicants use the term “complimentary to the transcript”. It appears as if the phrase that was intended was -- complementary --. Appropriate correction is required.

#### *Claim Rejections - 35 USC § 112, first paragraph*

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 6-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. **This is a new rejection necessitated by applicants’ amendment.**

The limitation that “the antisense oligonucleotide comprises at least 8 (or 12) contiguous nucleotides of a sequence” has been added to claims 1 and 3. The examiner has been unable to

find literal support in the originally filed specification for the term “comprises at least 8 contiguous nucleotides of”. As well, there is no inherent support for this term in the as filed specification. Furthermore, applicant has not indicated where support for this limitation is found in the specification (MPEP 714.02, 2163.06). The specification teaches design elements of antisense oligonucleotides which are ideally 8-60, 15-40 and 18-30 nucleotides. Most preferable of these is an 18 mer phosphorothioated oligomer. Specifically disclosed oligomers are SEQ ID NO:1, 2, 3 or 4. The specification does not teach that the oligomer can be 8-12 contiguous nucleotides from these sequences and therefore, the limitation of adding “the antisense oligonucleotide comprises at least 8 (or 12) contiguous nucleotides of a sequence” is impermissible NEW MATTER.

### ***Conclusion***

Claims 1-3 and 6-30 are rejected.

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 1633

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
